Restu Akbar

Software Engineer

Summary

Fresh graduate in Informatics Engineering from Politeknik Negeri Bandung with hands-on experience building applications end-to-end from planning and development to deployment through academic projects, internships, and independent work. Skilled in writing clean, scalable, and efficient code that follows industry standards, with a strong interest in solving complex technical challenges and optimizing system performance. Quick to adapt to new technologies and driven to deliver meaningful contributions to products with broad impact.

Experiences

PT. Pilar Wahana Artha – Part Time

Fullstack Developer & System Administrator

February 2026 - Present

- Designed and developed a CMS application for managing and publishing company landing page content.
- Built and maintained full-stack features, including content management, user access control, and API integrations.
- Deployed and maintained web applications on production servers, ensuring reliability and performance.
- Managed on-premises server infrastructure, including system configuration, monitoring, security updates, and troubleshooting.
- Implemented backup and maintenance procedures to ensure system availability and data integrity.
- Optimized server performance and application deployment workflows to support business operations.

CV. Karya Raya Teknologi (The Code Indonesia) – Part Time

Fullstack Developer & Java Tutor

November 2025 – January 2026

- Taught Java programming from fundamental to advanced topics, including OOP and Java Collections.
- Mentored participants in completing final projects using Java.
- Developed course and ebook management features in siapin app to support learning content distribution.
- Deployed and maintained the siapin application on a server via SSH, including server setup and application management.

PT. Progantara Teknologi Indonesia – Intern

Fullstack Developer & DevOps Engineer

June 2025 – October 2025

- Implemented backend logic for a presence application.
- Designed and developed RESTful APIs using Laravel.
- Worked with frontend teams, providing API documentation and integration support.
- Improved server efficiency through caching strategies and database query optimization.
- Built dynamic frontend components using Laravel Livewire.

-
- Integrated Laravel Excel to handle data import and export features.
 - Configured CI/CD pipelines to automate deployment processes.
 - Managed and maintained production servers, including monitoring and updates.

Education

Bandung State Polytechnic

Associate Degree in Information Technology
2023 – 2026

Projects

Atisisbada Content Management System

February 2026 – March 2026

Description

Atisisbada CMS is a content management system designed to manage and customize a dynamic landing page efficiently. The system enables administrators to control page content, sections, layouts, and media assets through an intuitive web-based interface without requiring direct code modifications.

Contribution

- Developed a dynamic landing page using Next.js.
- Built CMS features to manage landing page sections and content.
- Deployed and managed the application server.

Profiling & Dashboard Kepatuhan Komdigi

December 2025 – January 2026

Description

Profiling Komdigi is an application used to display profiles of broadcasting, postal, and telecommunications companies registered at Komdigi. The application presents detailed company data sourced from Komdigi Datahub. Dashboard Kepatuhan is a Komdigi application that displays annual compliance reports of companies toward Komdigi regulations. I contributed as a Fullstack Developer focusing on API updates and data integration.

Contribution

- Updated Profiling Komdigi APIs to support company profile data for broadcasting, postal, and telecommunications sectors.
- Identified and integrated data sources from Komdigi Datahub for use in Profiling and Dashboard Kepatuhan applications.
- Developed and improved APIs to display annual compliance report data on the Dashboard Kepatuhan.
- Ensured data consistency and accuracy between Datahub Komdigi and application services.
- Maintained and optimized backend services using Laravel.

Bayar Air – Website - App

August 2025 – October 2025

Description

Bayar Air is a mobile-based application developed to simplify and modernize the process of recording water meter usage in a practical, secure, and transparent way. The platform is designed to give users real-time access to their recorded data, ensuring accuracy and reducing manual errors in the billing process. I contributed as a Backend Developer, Mobile Developer, and DevOps Engineer.

Contribution

- Designed and developed a mobile-based application for water meter recording.
- Implemented features to log and store water usage data.
- Built interface with Compose Multiplatform.
- Designed and optimized database schemas using MySQL.
- Developed RESTful APIs using laravel.
- Applied Koin for dependency injection to improve modularity and scalability.
- Configured CI/CD pipelines (GitHub CI/CD) to automate deployments.
- Managed and maintained production servers in a Linux environment with Hostinger cPanel monitoring

Atisisbada

July 2025 – December 2025

Description

In this project, I served as a QA Tester, focusing on automated testing using Selenium (Python) for ATISISBADA (Regional Asset Management Information System), an application used by local governments in Indonesia to manage the entire lifecycle of regional assets, including procurement, utilization, maintenance, and disposal.

Contribution

- Designed, developed, and executed automated test scripts to validate application functionality.
- Enhanced testing efficiency while reducing reliance on manual testing.
- Accelerated the testing process and ensured consistent results using Selenium (Python).
- Identified defects at early development stages, minimizing risks in production.
- Contributed to software quality improvement and ensured application compliance with functional standards and regulations.

Lah Kerja

June 2025 – September 2025

Description

Lah Kerja is an integrated web and mobile application designed to support human resource (HR) management. The platform streamlines administrative processes such as attendance, overtime, leave, and employee loans, while improving efficiency, data accuracy, and accessibility for both management and employees. In this project, I served as a Backend Developer and DevOps Engineer.

Contribution

- Implemented backend logic using Laravel.
- Designed and developed RESTful APIs for mobile and web application integration.
- Collaborated with the frontend team by providing API documentation via Postman and integration support.
- Designed and optimized database schemas using MySQL.
- Configured CI/CD pipelines (GitHub CI/CD) to automate deployments.
- Managed and maintained production servers in a Linux environment with cPanel monitoring.

SSPM Akuprim

June 2025 – September 2025

Description

The Tax Period Notification System (SSPM) AkuPrim is a web application developed to support tax data recording and management for AkuPrim, a tax consulting firm, in serving their clients. The application includes features such as income tax (PPh) and value-added tax (VAT) recording, invoice reporting, and other tax documentation required by consultants. In this project, I served as a Fullstack Developer.

Contribution

- Integrated Laravel Excel for data import and export features.
- Developed email functionality using Laravel's mailing system to support client communications for AkuPrim.
- Built frontend components with Laravel Livewire.

Event and Volunteer

2024 Election Polling Station Working Committee (KPPS)

General Elections Commission

February 2024

- Ensured the availability and proper condition of all equipment and logistics, including voting booths, ballot boxes, and stationery.
- Organized and facilitated the voting process to ensure safety and order.
- Conducted vote counting with accuracy and transparency.
- Prepared reports on the voting and vote-counting results.

KEMA Polban General Election – Department Person in Charge (PIC)

Polban Student Representative Assembly

September 2023 – December 2023

-
- Developed effective communication skills by building strong relationships with representatives from each student organization within the campus departments.
 - Served as Liaison Officer, acting as a bridge between departments regarding the election, ensuring they understood the procedures and deadlines.
 - Moderated KEMA election discussions to ensure the sessions ran smoothly and constructively.

Organization

Polban Computer Science Student Association

Department of Scientific and Professional Development – Head of Research Division

May 2024 – January 2025

- Served as Chief Coordinator for the academic sharing program of Computer and Informatics Engineering students.
- Delivered material as a presenter in the Student Association's Teaching Project program.
- Led the Logistics Division for the Outstanding Student Seminar program.
- Head of Field Coordinator Division for TISIGRAM, a computational thinking competition for senior high school students.

Skills

Hard Skill :

- **Backend Development**
Spring Boot, Node.js, Express.js, Next.js, Laravel, Ktor
- **Frontend Development**
VueJs, ReactJs
- **Android Development**
Kotlin (Jetpack Compose)
- **Database**
PostgreSQL, MongoDB, MySQL
- **Server On Premise & Cloud**
Proxmox, Docker, Microsoft Azure, Nginx, Debian Server
